A prime number is a number which is only divisible by 1 and itself.

Given number N check if it is prime or not.

Example 1:

Input:

N = 5

Output: Yes

Explanation: 5 is only divisible by 1 and itself. So, 5 is a prime number.

Example 2:

Input:

Python3

Start Timer

```
1  } Driver Code Ends
9  #User function Template for python3
10
11 class Solution:
12     def isPrime(self,N):
13         # code here
14         if N<=1:
15             return False
16         for i in range(2,int(N**0.5)+1):
17             if N%i==0:
18                 return False
19         return True
20
21
22  } Driver Code Ends
```
