You are given an array **arr**(0-based indexing). The size of the array is given by **n**. You need to **update** an **element** at the given **index**. The arr[i] of the array is initially set to i+1.

NOTE THAT: You only have to update elements, you don't need to print or return anything.

Example 1:

Input:
n = 5
index = 4,element = 8

Explanation: Element at 4th index updated to 8

Example 2:

Input:
n = 2
index = 0,element = 99

Python3 ▾
