Quiz

1 of 10 QUESTIONS

QUESTION 1

5 marks

Find the output of the following program:

Python Code

```
nameList = ['Harsh', 'Pratik', 'Bob', 'Dhruv']  
  
print (nameList[1][-1])
```

- ☐ r
- ☐ b
- ☐ D
- ☒ k

Your submitted response was correct.

Explanation

The index position -1 represents either the last element in a list or the last character in a String. In the above given list of names "nameList", the index 1 represents the second element i.e, the second string "Pratik" and the index -1 represents the last character in the string "Pratik". So, the output is "k".
